

WeAreDevelopers Launches its India Conference as the Country Bets on AI and Innovation

Weeks after drawing 10,000 builders to Silicon Valley, WeAreDevelopers debuts in Bengaluru on November 25-26, 2026, with Entire as co-host and more than 100 speakers

Bengaluru / Vienna, October 5, 2026: WeAreDevelopers, the global platform behind the world's largest developer events, is coming to India. On November 25-26, 2026, the first WeAreDevelopers Conference India will take place at the Bangalore International Exhibition Centre (BIEC). It is the next step in the company's global expansion. In July, more than 15,000 developers gathered at the WeAreDevelopers World Congress in Berlin, and just weeks ago the North America debut brought 10,000 builders together in San José, in the heart of Silicon Valley.

WeAreDevelopers has grown from its European roots into a global brand where developers, AI builders and technology leaders keep pace with how software is built. Its network reaches millions of software professionals worldwide. Bengaluru, India's technology capital, is the obvious next stop.

India bets on AI

By 2047, the 100th anniversary of its independence, India aims to become a developed nation under its Viksit Bharat ("Developed India") vision, with technology at the core. According to NITI Aayog, the government's policy think tank, AI could add up to \$1.7 trillion to India's economy by 2035. Through the IndiaAI Mission, the government has committed about \$1.2 billion and onboarded more than 38,000 GPUs as shared national compute.

The talent is there to match it. According to GitHub's Octoverse 2025 report, India counts 21.9 million developers on the platform, with 57.5 million expected by 2030, and it is already home to the world's largest base of open-source contributors, many of whom have long been part of the WeAreDevelopers network. Their role is changing, too. Across more than 1,800 global capability centers, Indian engineering teams increasingly own global products and AI roadmaps.

"Technology is changing faster than ever, and our job is to make sure the people building it stay ahead," says Sead Ahmetović, CEO and Co-founder of WeAreDevelopers. "Developers from India have been part of our network for years.

After our events in Europe and North America, it's finally time to meet them in person. India's developers have long built the world's software. Increasingly, they will decide what gets built."

Entire joins as co-host

Entire, the AI-native developer platform founded by Thomas Dohmke, joins as co-host. Dohmke, who led GitHub as CEO through the rise of AI-assisted software development before returning to his startup roots, will deliver the opening keynote. He has spoken at WeAreDevelopers several times and is a well-known guest of its audience.

"WeAreDevelopers always puts developers first. They are independent and operate at a scale where the full spectrum of the community comes together. That's what makes it one of the best developer conferences in the world," said Thomas Dohmke, CEO of Entire. "India has the fastest-growing developer community on the planet, which makes it a natural home for the next WeAreDevelopers event. We're proud to partner with the team on the first Bengaluru edition, and to offer the first AI-native Git forge where any developer in India can build, review, and deploy their code at home."

More than 100 speakers, backed by the global developer ecosystem

Over two days, more than 100 speakers will take the stage in Bengaluru. The program covers building with AI, running agentic systems in production, platform engineering, security and engineering leadership, delivered as keynotes, technical talks and hands-on workshops for developers, engineering leaders and AI builders. The conference is supported by major names in the global developer ecosystem, including Google, IBM and GitHub, whose tools are part of the daily workflow of millions of developers in India and around the world.

The full lineup will keep growing in the coming weeks. Ticket sales open in mid-October. Get notified and secure your spot at <https://www.wearedevelopers.com/conference-india>

About WeAreDevelopers

WeAreDevelopers is the global platform for tech professionals to advance their careers in the age of AI. Millions of technology professionals use WeAreDevelopers to build skills, share knowledge and connect with peers. Companies use WeAreDevelopers to strengthen their employer brand, attract talent, drive product adoption and engage with the developer audience through the WeAreDevelopers

online platform and industry-leading events in Europe, North America and India. WeAreDevelopers World Congress is the company's flagship event and the world's largest gathering for developers, AI builders and technology leaders.
